Reasons

1. The invention related to the following claims of this application is based on inventions cited in the following publications, which had been circulated prior to this application in Japan or a foreign country. Because a person having ordinary knowledge in the technical field to which that invention belongs could have easily made the invention prior to this application, a patent cannot be granted pursuant to the stipulations of Article 29, Section 2 of the Japan Patent Law.

2. The description of the claims of this application do not fulfill the conditions stipulated in the Japan Patent Law Article 36, Section 6, Item 2 regarding the following points.

Record (Refer to the List of Cited Literature for the cited literature.)

(1) Regarding Reason 1

- Claims: 2 to 4, 8, 9

Described in Cited Literature 1 is technology for a routing substrate having micro-strip routing wherein the characteristic impedance of the signal routing is adequately controlled by a ground layer with an opening. The fact that the aforementioned opening is designed so that the most suitable electric characteristics are obtained is something that a person skilled in the art could easily obtain. Furthermore, reducing the AC couplings is nothing more than a normal consideration.

- Claims 1, 5 to 9

Modifying the design of the technology described in Cited Literature 1 to provide an opening in the signal routing could be easily accomplished by a person skilled in the art.

(2) Regarding Reason 2

- Claim 8

The invention related to Claim 8 is dependent on Claims 2 to 7, but the invention related to Claim 8 is unclear because "other signal lines" is not described in Claims 2 and 5.
